### **Eurocor: New technology presented at the SAINT 2010 Symposium**

**For the first time, Bonn life sciences company Eurocor is attending the SAINT symposium for applied intervention-radiology technology in Rheingau**

**Bonn, 8 September 2010** – "New Coating Concept for Drug-Eluting Balloon". This is the title with which Prof. Stephan H. Duda, renowned doctor and specialist for interventional radiology in Berlin will be presenting Eurocor's new DEB FREEWAY 014 for special treatment of arteriosclerosis in the blood vessels of the calf. FREEWAY 014 has been specially developed for use in the blood vessels below the knee.

Its advantages:

- Innovative, non-crystalline coating technology consisting of a Schellac/Paclitaxel mix
- Wide product range with balloon lengths of up to 150 mm
- Low balloon profile
- Good crossing profile
- Small lock compatibilities
- Distal hydrophile shaft coating
- Fast deflation times

This new calf balloon thus measures up to all available competing products.

The 6<sup>th</sup> SAINT symposium for applied intervention radiology technology is being held on 10/11 September at Schloss Johannisberg in Rheingau. Around 150 interventional radiologists from all over Germany will be attending the event.

"The Rheingau gives us the possibility of presenting our successful technology to a selected medical audience", says Katja Hausner, Director Corporate Business Affairs at Eurocor.

The company

**Eurocor GmbH** is a rapidly growing life sciences company specialising in the research, development and manufacture of cardiovascular catheter devices and coronary stent technologies. The products manufactured by the company in Bonn are used in minimally invasive cardiovascular surgery and comply with biological and biomechanical principles to offer highly flexible, adaptable solutions. Eurocor has developed an innovative method for drug-eluting balloon catheters with maximum patient safety and compatibility.
